CAI Technologies
### Precision Mapping. Geospatial Solutions.

What CAI Technologies is all about…

At CAI we focus on listening to our clients, understanding their needs, and implementing the appropriate technology to provide geospatial solutions. We are committed to working alongside our clients every step of the way to deliver results through value-added applications, data development, and consulting services.

Our passion for providing mapping and GIS services is supported by nearly 30 years of providing high-quality products and services for local governments. We are a leader in GIS through hard work, dedication, and commitment to our customers.

SERVICES

GIS SERVICES

Founded in 1985 as Cartographic Associates, Inc., CAI Technologies has provided geographic information system (GIS) services to local and regional governments since 1989. From concept and design, to implementation, maintenance, training and support, we have the knowledge, expertise and resources to provide advanced GIS services.

We listen to our clients to understand their business processes and organizational needs. By doing so, we deliver efficient cost-effective solutions.

MAPPING SERVICES

CAI is a recognized leader in local government parcel data development. We developed the original parcel fabric, including record research and compilation, for more than 200 municipalities and currently develop and maintain parcel maps for nearly 400 municipalities. **CAI Technologies specializes in geodatabase design, GPS field collection and utility infrastructure mapping** for municipalities and private parties, and can develop or incorporate overlay data such as wetlands, zoning, floodplain and other critical information.

UTILITY INFRASTRUCTURE

CAI leads the way in cost-effective geodatabase design, GPS field data collection/mapping and implementation services for critical utility infrastructure, such as water, sewer, and drainage systems. We develop field data collection tools to make system mapping, implementation and ongoing maintenance for applications ranging from one of the largest water systems in the United States to a tiny, two-mile-long system.

Our utility-specific GIS solutions feature simple-to-use desktop, browser and mobile solutions that allow novice and advanced users to manage and maintain critical infrastructures, and create standard and customized data, maps and reports.

WEB SOLUTIONS

CAI offers the most advanced, user-friendly, cloud-based, Software as a Service (SaaS) GIS platform available. Our ArcGIS Server SaaS solution allows users to query, browse, report, print, share geospatial content and access information from any browser, tablet or mobile device.

Our platform is scalable and eliminates the need for upfront hardware or software purchases and maintenance contracts. It offers local control of database updates, staff-specific security for sharing specific datasets within your organization, and document upload/management tools and configuration options with your ArcGIS online account or ArcServer licensing.

CUSTOMIZED SOLUTIONS

CAI also develops customized GIS solutions for local, regional and state governments, distributed utilities and private businesses. From simple, single-purpose desktop applications to enterprise-level system architectures serving hundreds of users, we offer a full scope of development services including requirements analysis, functional design, development, installation, training and support.
